

Board Hiring for Technology & Manufacturing Company

The client case was to search board members to 2 different clients. Both companies are representing the ICT-sector. One is a listed company with HQ in Finland who provides machinery engineering solutions and software to the world's leading companies in the manufacturing industry and the other is a global software company with a strong presence in more than 70 industries worldwide. The angle was to find board members with the knowledge of IOT, AI, Digitalization, Robotics and to represent the customer view.

The search in both the cases ended successfully and we presented such good candidates that both of our clients ended up choosing 2 new board members to be nominated to their boards. The search was completed in both cases within 2 months.
